Response to Arguments

Claim 34 recites a spacer having a first portion and a second portion, a contact having a portion that extends on two opposing vertical sides of a first portion of the spacer. According to Figure 19 of the instant Application, there is no an insulating layer having a portion that extends on two opposing vertical sides of the second portion of the spacer. The left most side of Figure 19 shows a single insulating layer 24 having a portion that extends on two opposing vertical sides of a second portion of a different spacer. Claimed limitations which include the phrases "a first spacer and a second spacer adjacent the gate electrode", "a contact having a portion that extends on two opposing vertical sides of a first spacer …" and "an insulating layer having a portion that extends on two opposing vertical sides of the second spacer …" would overcome the rejection.
